

Shortages of essential and lifesaving medicines can create a public health crisis in the United States. The surge in demand for less expensive generic drugs during the recent COVID pandemic showed how vulnerable our supply chain is and why there is a need to prevent shortages in times of national crisis or military conflict. Do you support or oppose the United States Government take additional steps to ensure an adequate supply of drugs and medicines to be prepared for potential future national emergencies?

The Department of Defense is responsible for ensuring that our armed forces are well-trained, properly equipped, and ready to defend our nation. Having a ready supply of essential and lifesaving medicines ensures that our servicemembers are healthy, fit, and deployable. Would you support or oppose a program to create a strategic “buffer stock inventory” of essential medicines for the Department of Defense?

The Essential Medicines Strategic Stockpile proposal for the Department of Defense would build upon existing Defense Health Agency programs and utilize the efficiency of private sector pharmaceutical distribution channels. The proposal creates a pilot program to acquire, manage and replenish a six-month supply of essential medicines that would protect our troops and their families from drug shortages and supply chain vulnerabilities. Would you support or oppose the creation of this program, which would cost the federal government approximately \$12 million?
